

DJ/VJ combo

After viewing the free Pioneer DVD, which came with DJmag no75/vol3, me and my VJ partner's faces were left wide-eyed with amazement at the DVJ-X1s. We've already begun saving for a pair! In our current set-up we use Arkaos, though we use Final Cut to produce special footage for clubs. Currently we're looking for a venue that can support a DJ/VJ combo on a longer term basis.

We're already looking for places ourselves but most lack good projection facilities. We'd welcome a mention in DJ Magazine advertising the fact that a pair of multimedia jocks are on the lookout for a place to play in London. We'll DJ and VJ for free so hopefully there is somebody out there who can put us to good use!
